

# AIRFLOW TENT FEATURES:

## **ENTRY/EXITS**

Multiple entry/exits are great for getting the breeze flowing through the tent and cooling it down on those hot summer days.

## **BUG FREE SYSTEM**

Privacy pods create a sealed enclosure inside the main tent that creates double protection against little critters.

## **COLOUR CODED FRAME**

Coloured tabs sewn onto the end of the pole sleeves match coloured tabs around the base of each pole. Makes pitching simple and fast.

## **DRAFT VENTS**

Lower vents that let cool air into the bottom of the tent and force warm air out the top.

## **INNER ROOM PEG POINTS**

Peg points that peg directly into the ground increases the strength of the tent and the space inside the privacy pod.

## **NO NOISE FINDME ZIP PULLERS**

Reflective cord pullers that don't make noise on windy nights and can also be found easily with the torch.

## **PRIVACY PODS**

Clip in internal bedrooms provide privacy and additional warmth. Can be taken in an out depending on the layout required.

## **WEATHERPROOF WINDOWS**

Windows that can be opened during rainy days without letting any weather inside your tent. Positioned low enough to be opened without getting out of bed.

## **POWER CORD ACCESS**

Small zip opening that allows cords to enter while keeping bugs out.

## **CARRYBAG (EXPANDABLE)**

Gusseted bag that is big enough to get the tent into the bag every time, no matter how poorly you have packed it up.

## **INTERNAL STORAGE LADDERS**

Handy mesh pockets to keep everything tidy and close at hand

## **RAPID EXTERNAL PITCHING SYSTEM**

Colour coded external pole sleeves. Allows the tent to be pitched without letting bugs or rain inside the tent. Our fastest pitching system.

## **WET VESTIBULE AREAS**

Protected entry / exits that can be used for storing wet, sandy and dirty gear.

## **ANTI GRIT REVERSED ZIPS**

Reversed zips that are less likely to clog up with sand, grit, and salt spray. Increases the life of your zips and tent

## **CENTRAL VESTIBULE**

Living area centrally located to provide the greatest amount of headroom and protection from the elements. Also gives you some privacy if required.

## **D DOOR DESIGN**

A traditional zipped door that can be rolled up and tied away.

## **GEODESIC FRAME DESIGN**

Poles that cross over each other creating strong intersections.

## **LEVERAGE FRAME DESIGN**

Anchor points on either side of a central dome create a strong structure with a frame design that's easy and fast to pitch.

## **STARLIGHT ROOF**

A removable vent cover allows you to sleep under the stars. Super fine mesh prevents dew from entering the tent.

## **WET WEATHER ACCESS**

Protected doors that can be used without letting rain inside your tent.

## **YKK ZIPPERS**

The best zippers money can buy!

## **HOT TAPE SEAM SEALED**

To ensure no chance of water leaking through the seams, all Freedom tents are hot tape seam sealed. Applied with 600 degree heat to make sure it stays in place.

## **AIRFLOW ROOF**

Large vents in the tent roof allow hot air to escape, making the tent much cooler during the day. A must have for camping trips during the hot NZ summer days!

## **360° DOOR DESIGN**

360° degree door zips mean the entire door can be unzipped and folded into a pocket. Keeps everything tidy.

## **ADDITIONAL AWNING POLES**

Collapsible Poles included in some of the tents allow you to pole out the door or window to provide extra shade. If not included in your choice of tent or you require additional poles they are available as an optional extra.

## **INTERNAL WINDOWS**

Windows that can be opened from inside the tent. This design also allows windows to be zipped halfway up converting them into vents.

## **DOMES AWNING**

Every Freedom Airflow tent has the capability to attach a Dome Awning as an optional extra. These are perfect for creating a large shaded area over the entrance to your tent.
